

Crypto Elefund

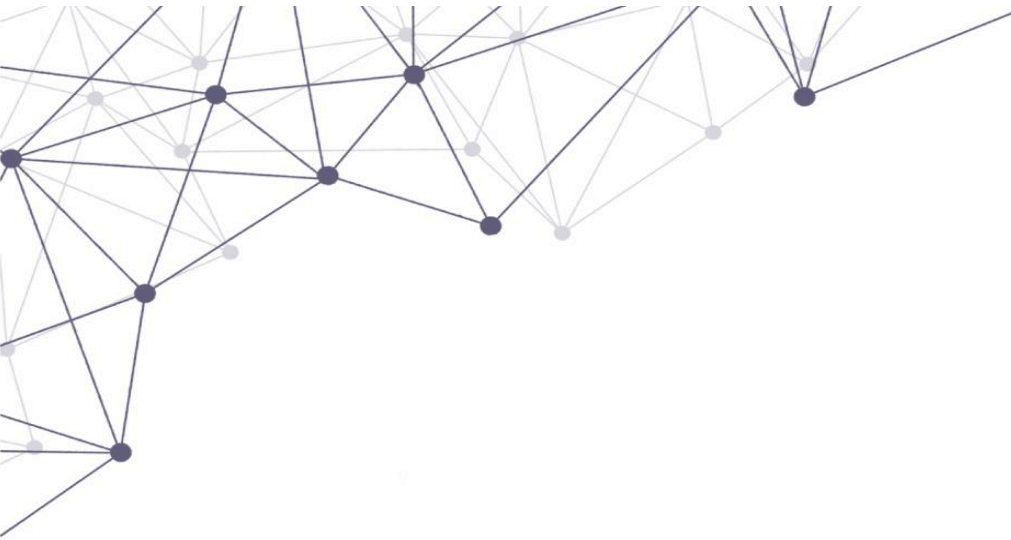

A decorative network diagram consisting of interconnected nodes and lines, rendered in shades of gray and black, is positioned in the top-left and bottom-right corners of the page. The nodes are represented by small circles, and the lines are thin, connecting the nodes in a complex, web-like structure.

ABOUT US

Crypto Elefund is a purpose-driven company operating as a business developer with a clear objective of expansion.

Our company's mission is to leverage our innovative systems and extend our presence into crypto-friendly destinations, aiming to establish a legitimate investment fund accessible to all types of investors worldwide. Over the next two years, we plan to expand into Dubai, specifically within the DMCC or MEYDAN area. This move will enable our company to offer its services and investment fund globally while participating in one of the leading cryptocurrency destinations that is evolving as a hub for digital asset innovation.

In 2016, we entered the market as a private cryptocurrency fund with our own algorithm, intended exclusively for qualified investors, which currently manages exclusively private assets. Our many years of experience led us to the decision to make cryptocurrencies more accessible and raise awareness about them not only to qualified investors, but also to the general public.

Advanced technological development, which is constantly advancing, offers a wide range of semi-automated and automated systems that can be used for trading on the exchange. However, these systems have their limits and restrictions. A specialized team of 14 members has developed a program that overcomes these limitations and gives the system a wider range of use.

Using artificial intelligence based on a type of neural network and machine learning, a technology has been created that can accurately predict market behavior in the next few hours and thus analyze in detail the development of the cryptocurrency market.

UTILIZING ARTIFICIAL INTELLIGENCE IN CRYPTOCURRENCY TRADING

Cryptocurrencies and their high potential to become the new, digital form of money, are already a significant investment tool. However, for many investors, they are still a controversial topic with a considerable amount of risk. The technology we possess, however, eliminates these risks to a reasonable level that is replaced with above-average returns and protection of invested funds. The system undergoes constant monitoring, development, and improvement to contribute to the facilitation of decisions that require complex mathematical and economic knowledge.

Our professional team of 14 members working on the development of the system consists of a wide range of professions, including IT specialists, mathematicians, economists, and also psychology experts. This professional team constantly monitors the proper functioning of the system and analyzes each output in detail. By combining modern technologies, artificial intelligence, and the human factor, we have created a unique system that brings investors above-average and stable results that significantly exceed currency inflation.

The cryptocurrency market is vast and difficult for unqualified investors to navigate. With the technology we utilize, orientation is much simpler and more accessible even to the general public.

INVESTMENT PLAN

The investment objective is to replace and surpass strategies commonly used in cryptocurrency assets (such as buy & hold, hedge, arbitrage, etc.). To achieve this, we use a system developed by a team of experts that is based on artificial intelligence using neural networks and machine learning. The system can accurately and efficiently evaluate the cryptocurrency market and at the same time protect portfolio value and bring investors stable returns. The precise mathematical and expert model even generates profits during bear market periods or sideways movements.

We aim to provide above-average returns in the field of cryptocurrencies to investors who are not satisfied with the available products traded on the investment and capital markets and expect higher returns. Virtual currencies are a completely legitimate asset and a recognized type of digital currency.

The unique algorithm based on artificial intelligence and machine learning surpasses the analyses of traders and semi-automatic systems. With a 14-member team of experts, we are constantly working to improve and achieve a reduction in risk with at least the same returns as traditional cryptocurrency assets offer. We offer investors who want to invest in crypto an investment with a reasonable level of risk and at the same time provide above-average returns.

INVESTMENT STRATEGY

The system utilizes dozens of purposefully selected, historically tested, and proven trading strategies to trade cryptocurrencies on the largest crypto exchanges. These strategies are guided by time series analysis and forecasts conducted by a deep neural network.

This trading system is applied to both spot and futures markets. Most of the portfolio is allocated to spot trading, while a minority portion is used for futures trading, where long and short positions can be opened using leverage. The holding time for open positions ranges from minutes to days.

KEY FEATURES:

- The program allows investors to **achieve above-average returns that exceed inflation** and are comparable to the performance of any long-term „hold “strategy during a bullish market.
 - The continuous, 24/7 operation of the fully automated system, combined with its ability to predict changes in trends (including corrections and bear markets), **significantly reduces market fluctuations risk** and can effectively **protect portfolio value**.
 - The trading system and its robust infrastructure enable the generation of long-term, stable, and high profits without the need for human intervention. **It minimizes the margin of error and the failure of the human factor**; The strategy aims to develop market-neutral trading with a low beta factor and has been able to generate profits even during periods of cryptocurrency market declines.
 - Cryptocurrencies offer an interesting investment opportunity and are an excellent complement to a diversified portfolio. Including cryptocurrencies in a regular portfolio of stocks and bonds can **improve overall portfolio performance and reduce the level of risk**.

THE PERFORMANCE OF THE TECHNOLOGY:

The graph shows how the return on investment of 1 USD invested in a fund using our technology compares to the performance of investing 1 USD directly into selected underlying assets BTC/USD and ETH/USD.

The graph indicates that an investment of 1 USD in the fund utilizing our technology would have yielded more than 9x gross returns during the period from January 2018 to March 2022, compared to investing the same amount directly into the chosen underlying asset (Bitcoin) and more than 4x gross returns compared to investing the same amount directly into the selected underlying asset ETH (Ethereum).

Performance of 1 invested USD

INCOME/MONTH

The data contained in the table are the results and metrics of our proprietary trading technology used by Crypto Elefund. Historical fund returns are not a guarantee of future performance. Investment performance is for illustrative purposes only and does not include transaction costs and the fund's performance fee, the structure and terms of which are described in the investment strategy and in the investment agreement.

2023	40,30%	84,26%	15,92%

RISK PROFILE OF OUR TRADING SYSTEM AND BITCOIN – 1/2018 – 6/2023

Metrics	Crypto Elefund	BTC
Cumulative Return	3 996 %	122,58%
Returns Annualized	94,44%	15,41%
Volatility Annualized	54,62%	75,40%
Downside volatility Annualized	20,14%	34,2%
Sharpe Ratio Annualized	1,63	0,14
Sortino Ratio Annualized	4,43	0,3
Maximum Drawdown	-61,59%	-74,96%
Biggest Monthly Loss	-25,5%	-37,35%
Beta to BTC	0,46	1

- 
- The annualized Sharpe ratio is calculated as the annualized return of the trading system of the Crypto Elefund fund compared to the 3-month US Treasury bill rate, representing the risk-free rate, divided by the annualized standard deviation of the trading system.
 - The annualized Sortino ratio is the ratio of the excess return of the trading system of the Crypto Elefund fund compared to the risk-free rate divided by the downside deviation of the portfolio.
 - The maximum drawdown is the largest loss from peak to trough until a new peak is reached.
 - The Beta to BTC is the covariance of the trading system's return with the return of Bitcoin divided by the variance of Bitcoin's return since the beginning of our trading system.

COMPANY DETAILS

Company name: Crypto Elefund

Structure: alternative fund

Start day: 11/22

Strategies: algorithmic trading (AI, MI, DA, ML)

Recommended Investment Horizon: 5 yrs

Use of leverage: yes (minority portfolio share)

Short Strategy: yes (minority portfolio share)

Domicile and Tax residence: Czech Republic

Administrator: Crypto Elefund s.r.o.

Transaction Fee: max. 3% of transaction value

Performance fee: min 50% interest above HWM*

Minimum Investment: EUR 125.000

Investor Profile: Qualified Investor not US tax resident

Base currency: EUR

Reporting: quarterly

Performance Fee Settlement: quarterly

Official presentation to qualified investors

Service Bank: FIO bank s.r.o.

* HWM: High – water mark (HWM) is the highest peak value reached by an investor's share.

Tatana Turkova
Chief Executive Officer

I've spent my entire professional career in the banking sector in the Czech Republic, where I've held two primary roles: working closely with clients and managing financial assets. I now refer to those assets as "fiatcoins," a term that reflects the evolving nature of money. While some might consider labeling them as "stablecoins," a deeper understanding of the financial landscape reveals that there's little stability to be found in these assets. Fiatcoins are subject to the continuous operation of money printers and the pressures of inflation, both of which undermine their stability.

Money, in its current form, is inherently flawed and poised for a significant transformation, much like any other technology. Predicting the exact outcome of this transformation is a challenging task. In response to these dynamics, I've made the decision to dedicate my future endeavors to the convergence of AI and Bitcoin (BTC) as a means of preserving value. Our systems have the potential to offer the stability that traditional money lacks.

My mission is to establish an investment fund operated by our AI systems, with a global reach. As a first step in this journey, I am in the process of setting up an office in Dubai, marking the initial phase of our market presence.

Warm regards,
TT
